

## WHO IS UKWAZI?

Ukwazi is a Zulu word that means “to know”. This aptly describes the nature of our business: leveraging technical and industry insight and expertise to drive commercial success and sector development.

We are one of the largest specialist  
mining service providers in Africa

### Focused on:

- Bankable feasibility studies
- Independent technical reports
- Engineering & infrastructure design
- Outsourced technical services
- Training and technical skills transfer
- Project and execution contract management
- Build and operate mining infrastructure
- Open pit and dredge mining contracting
- Underground LHOS contracting
- Integration of mining technical systems

We deliver independent advisory, technical systems integration and operational contract mining services, making us your ideal technical and execution partner.

Our technical mining engineering approach, combined with a strong industry experience allows for operational excellence, cost optimisation and continuous improvement.

Our advisory businesses are level 2 BBBEE contributors, committed to transparent and effective transformation within the industry, in partnership with our clients and technical partners.

### Our approach

We are committed to:

- Safety
- Risk mitigation
- Regulatory compliance
- Technical excellence and experience in mining
- Transparent engagement and reporting
- Developing innovative technology and cost-effective engineering solutions
- Enhanced productivity and profitability
- Providing local, on-the-ground sector experts
- Driving skills development and job creation

## What we do

We focus on a “one size fits none” approach - each phased technical offering is customised to our individual clients’ unique specifications.

## We offer:

- Digital integration of existing client systems to generate business intelligence across the mining value chain
- A unified product suite that is able to address our clients’ technical requirements
- A reduction in the project risk and complexity through bespoke solutions
- Accurate and transparent execution, line management and executive reporting
- An effective implementation platform for continuous improvement initiatives
- Exceptional teams with in-depth experience and understanding of mining and the integration of technical software systems

We have in-depth knowledge of the solutions available from the major industry software providers and are capable of implementing and integrating industry relevant products.

**We service the industry’s demand for holistic, integrated mining systems that enhance efficiencies, whilst significantly decreasing costs. We do this by enabling physically separate but standard mining systems to function collaboratively.**

## System integration allows for data-driven decision making that:

- Provides operational transparency from pit to market
- Delivers a platform for operational optimisation
- Provides validated, near-real-time production performance business intelligence
- Drives multi-disciplinary collaboration across the value chain
- Drives digital effectiveness

Industry viewpoints have shifted – it is no longer good enough to “sell what we mine”. Today we have to “mine what we sell”.
